

01 Mar 2016

With the NAMM announcement of DiGiCo's Stealth Core 2 upgrade, you will soon be able to upgrade your current SD9 with the latest processing and application code. This upgrade will be an option for the company's SD series digital mixers and is due to be released this summer across the range.

Whilst the external architecture of the SD9 remains in its familiar form, Stealth Core 2 will open up a massive additional amount of processing ability, thereby taking the complete range to a new level of processing and flexibility. The SD9 upgrade will include:

- An increase from 48 channel strips to 96
- An increase from 24 output busses to 48 + Master + 12 x 8 Matrix
- An increase from 8 to 154 DiGiTuBes
- An increase from 8 to 154 Multiband Dynamic options
- An increase from 8 to 154 Dynamic EQ's
- Digital FX rises from 8 to 12 units
- Control Groups rises from 8 to 12 to control the increased channel count

"Being able to expand not only the features, but the audio processing in the SD range consoles, is really allowing our customers to gain more value from their existing and future investments" confirms James Gordon, Managing Director, "In fact we are even going to apply discounts to the upgrade to make it even more accessible for all our existing clients who have been loyal to the DiGiCo brand."
