

07 Apr 2017

The new DiGiCo S App is the perfect way to control your DiGiCo S-Series console straight from your Apple iPad. Designed to be compatible with DiGiCo's S21 and S31, it allows remote, wireless control of any DiGiCo S-Series mixing console wherever you are.

The DiGiCo S App permanently displays an overview of the console layout, so you can select any available console bank and have the same user-friendly operation you are already familiar with, without being tied to your console.

What you can control:

- Channel Setup - +48V, polarity, analogue gain, digital trim, channel delay, insert points on/off, meters
- Mix – channel label, pan, mute solo, fader level, meters
- EQ – 4 band EQ plus HPF/LPF
- Dynamics – all dynamics parameters for all console dynamics modes
- Auxes – auxiliary send levels, on/off, auxiliary pans
- Buss Routing – assignment of channels to busses
- Snapshots – insert new, recall, update, delete
- Matrix – sends, on/off, matrix input labels
- Graphic EQ – 32 faders and on/off for each unit, flatten all bands
- Save Session
- There is also an overview mode for selecting the Bank that you wish to control. Tap the arrow down symbol in the top right corner of the main view

- Connection details can be saved for different devices
- Aux Select buttons can (optionally) activate the Solo function for the relevant Aux Channels. Tap the Aux Menu button a second time to activate/deactivate this function.

The DiGiCo S App requires V1.4+ of the S-Series console software and the iPad connection must be configured on the console. It is not compatible with earlier versions of S-Series software.
