

21 Mar 2016

DiGiCo's SD11 and SD11i may be small in size, but they are already a powerful solution that works for just about any mixing environment. With the addition of a Stealth Core 2 upgrade option, these tabletop mixing solutions won't get bigger in size, but they will in power.

The SD11 upgrade will include:

- An increase from 32 channel strips to 48
- An increase from 12 output busses to 24 + Master + 8 x 8 Matrix
- An increase from 4 to 82 DiGiTuBes
- An increase from 4 to 82 Multiband Dynamic options
- An increase from 4 to 82 Dynamic EQs
- Digital FX rises from 4 to 6 units

The SD11i upgrade will include:

- An increase from 40 channel strips to 80
- An increase from 12 output busses to 24 + Master + 8 x 8 Matrix
- An increase from 6 to 114 DiGiTuBes
- An increase from 6 to 114 Multiband Dynamic options
- An increase from 6 to 114 Dynamic EQs
- Digital FX rises from 6 to 8 units

As with the entire range of SD series, this upgrade will be an option and is due to be released this summer.

“Once again we are looking after our customers return on investment, by giving them the possibility to improve on what they already own,” says Ian Staddon, DiGiCo’s Vice President of Sales. “This continues to reinforce our decision to use FPGA technology and emphasises its power, as the upgrade will only require new software.”
